

**Are you the parent or know someone who is the parent of a child with autism between the ages of 6 and 12 years old?**

If you are reading this, your child may be eligible to participate in an exciting research study on the effects of motor interventions on motor skills, sensory integration, and social outcomes in children with autism!

**What's involved?**

- Come to the Music and Health Science Research Collaboratory (3<sup>rd</sup> floor @ 90 Wellesley West)
- Participate in free therapeutic services by a certified health professional to address specific aspects of motor skills over the course of 7 weeks
- Receive assessment information regarding your child's motor, sensory integration, and social profile
- Receive a small thank you gift card at the completion of the study

**Your child can participate if you meet the following criteria:**

- A person with autism between 6 and 12 years old
- Can understand and carry out simple verbally, physically and/or visually cued directions
- English-speaking
- Normal vision and hearing
